BRAIN SURGICAL NAVIGATION — ALL-IN-ONE PRINT SHEET

Single Page: 6-DOF Stylus Cube Net + Patient Anchor Marker | Print at 100% scale (No fit-to-page)

<- Exactly 50 mm Ruler Scale Check ->

PART 1: 6-DOF SURGICAL STYLUS CUBE NET (Fold onto Dice)

Cube Edge: 25.0mm | Marker Size: 20.0mm | Pen attaches at BOTTOM face

Face ID Reference Map:

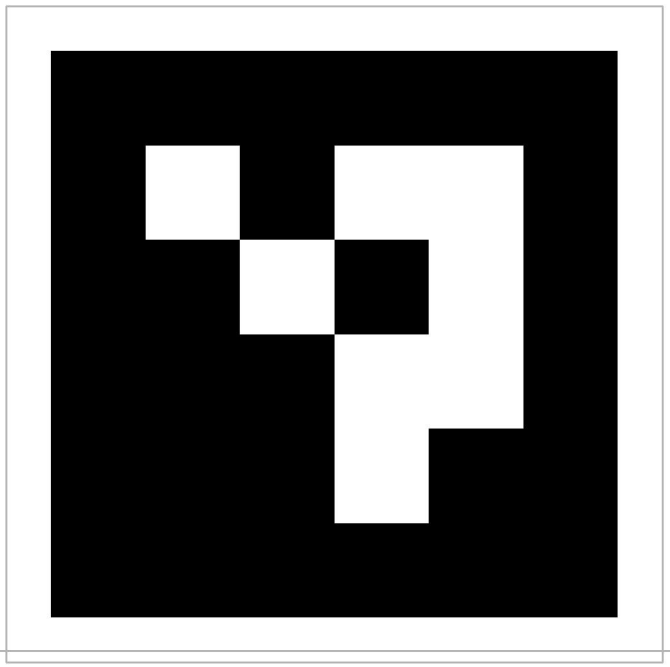

* Face TOP -> Marker ID 5
* Face FRONT -> Marker ID 1
* Face RIGHT -> Marker ID 4
* Face BACK -> Marker ID 2
* Face LEFT -> Marker ID 3
* Face BOTTOM -> Marker ID 6 (Pen shaft)

How to Assemble:

1. Cut around outer cross boundary.
2. Fold along interior square seams.
3. Wrap & glue/tape firmly around dice.
4. Tape or hot-glue pen to BOTTOM (ID 6).
5. The pen now tracks continuously in 360!

PART 2: OPERATING TABLE ANCHOR MARKER (Spawns the AR Brain)

Marker ID: 0 | Place this flat on your desk/mousepad where the 3D Brain will appear in AR

Patient World Anchor Guide:

* Size: 75mm high-contrast fiducial.
* Place flat on your desk in view of the webcam.
* The 3D patient brain model automatically locks and spawns directly above this marker.
* If marker is not in view, the station smoothly anchors the brain at a calibrated spatial target.

LAUNCH COMMAND: python -m surgical_tracking.surgical_navigation_app --camera 0

Hotkeys: [N] Next Patient | [M] AI vs GT Model | [C] Toggle Cortex Shell | [P] Pivot Calibrate | [Q] Quit
